

# ConfigFinder by Magentiz

Magentiz ConfigFinder Extension, backend config finder for magento 2.

Magentiz ConfigFinder is a powerful solution designed to optimize the management of configurations in the Magento 2 admin. With admin pages extended by multiple extensions, having hundreds of configurations can make it challenging to remember the location of each one. This enhanced module aims to improve that by allowing administrators to easily search for configurations using keywords. Administrators just need to input keywords, and it will help find the paths and indexes of configurations related to those keywords.

## Requirements

- Magento Community Edition 2.4.x or Magento Enterprise Edition 2.4.x
- Exec function needs to be enabled in PHP settings.

## Features

- Search for configurations by keyword with 2 search types: Index and Path.
- Search for stores.

## Installation Method 1 - Installing via composer

- Open command line
- Using command "cd" navigate to your magento2 root directory
- Run command: `composer require magentiz/config-finder`

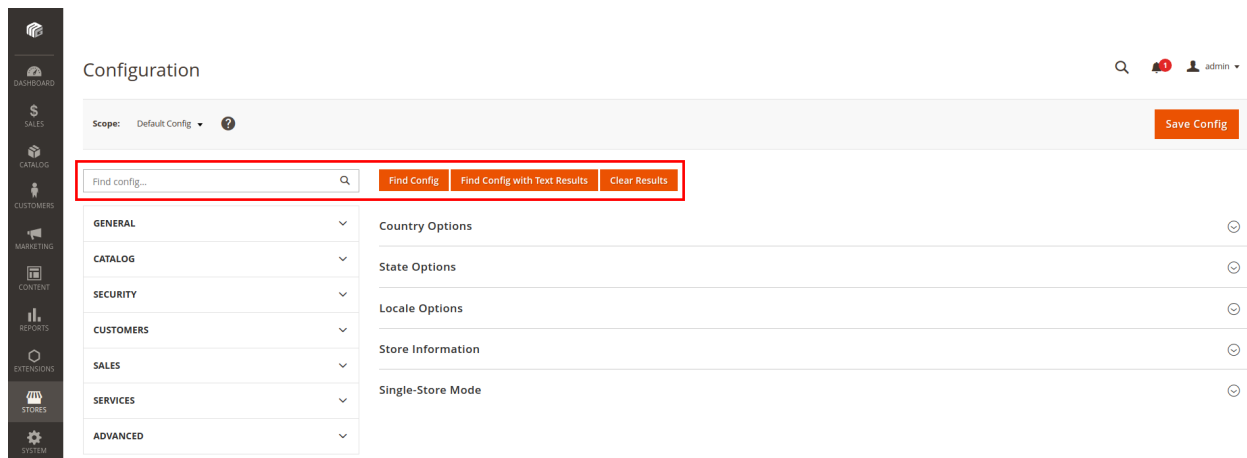

## Installation Method 2 - Installing using archive

- Download [ZIP Archive](#)
- Extract files
- In your Magento 2 root directory create folder `app/code/Magentiz/ConfigFinder`
- Copy files and folders from archive to that folder
- In command line, using "cd", navigate to your Magento 2 root directory
- Run commands:

```
php bin/magento module:enable Magentiz_ConfigFinder
php bin/magento setup:upgrade
php bin/magento setup:di:compile
php bin/magento setup:static-content:deploy
```

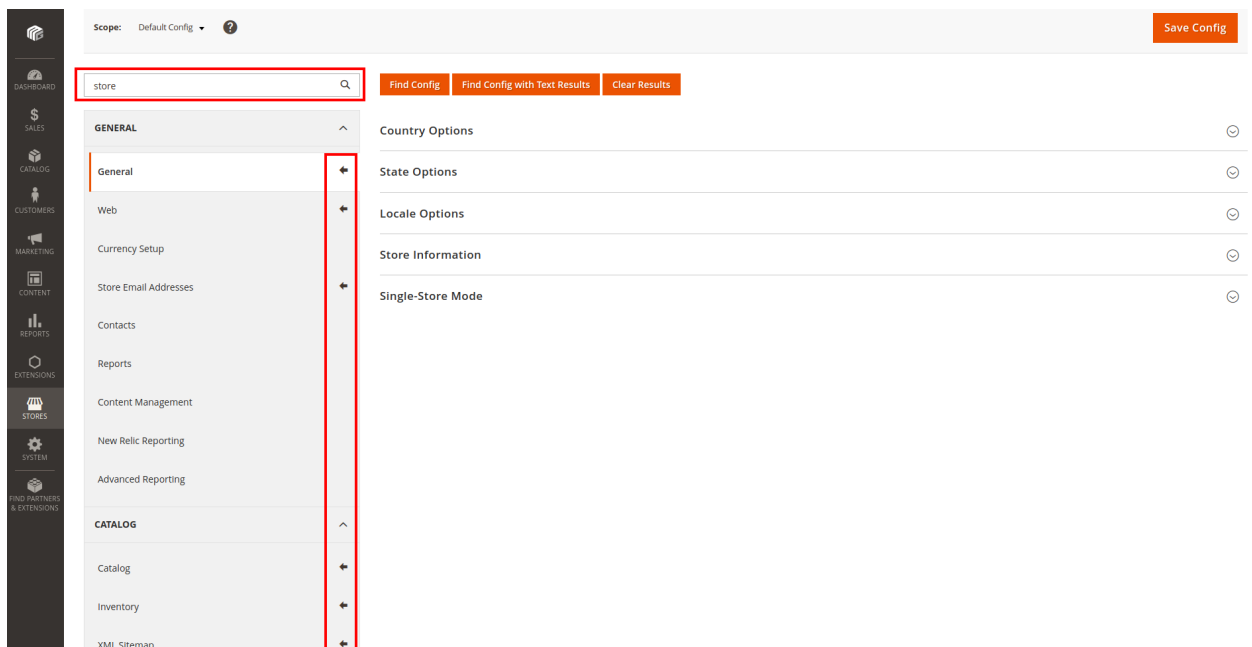

# User guide

Log into the Magento administration panel, go to **Store > Configuration**.

You can see the Find Config bar with the options:

- **Find Config:** Search and display the configuration.

- **Find Config with Text Results:** Search and display the paths (links) to configurations.

The screenshot shows the Magento configuration interface. At the top, there's a search bar with the text 'store' and a magnifying glass icon. To the right of the search bar are three buttons: 'Find Config', 'Find Config with Text Results' (highlighted with a red box), and 'Clear Results'. Below the search bar, a large red box highlights a list of configuration paths. These paths include various settings like 'Store Name', 'Store Phone Number', 'Store Hours of Operation', 'Single-Store Mode', 'Add Store Code to Urls', 'Use Secure URLs on Storefront', 'Store Email Addresses', 'Storefront', 'Display Products Availability in Stock on Storefront', 'Store URL Options', 'Google reCAPTCHA Storefront', 'Storefront Security', 'Store To Login To', 'Show VAT Number on Storefront', 'Enable CAPTCHA on Storefront', 'Order Ready For Pickup in Store', 'In-Store Delivery', 'Max Session Size in Storefront', 'Enable Template Path Hints for Storefront', 'Enable Hints for Storefront with URL Parameter', and 'Enabled for Storefront'. Below the search results, there's a section for 'GENERAL' with a dropdown arrow, and a list of options: 'Country Options' and 'State Options'.

- **Clear Results:** Hide search results.

You can also search for a store to configure.

The screenshot shows the Magento configuration interface. At the top, there's a search bar with the text 'main' and a magnifying glass icon. To the right of the search bar are three buttons: 'Find Config', 'Find Config with Text Results', and 'Clear Results'. Below the search bar, a dropdown menu is open, showing three options: 'Main Website', 'Main Website Store', and 'Stores Configuration' (highlighted with a red box). Below the search results, there's a section for 'GENERAL' with a dropdown arrow, and a list of options: 'Country Options', 'State Options', 'Locale Options', 'Store Information', and 'Single-Store Mode'.
